Ceva Animal Health has introduced an improved version of Hepatosyl that contains the same antioxidant ingredients as the original, but now also contains Silybin, the most active isomer of Silybum marianum (milk thistle).

Ceva Animal Health has introduced an improved version of Hepatosyl that contains the same antioxidant ingredients as the original version but now also contains Silybin, the most active isomer of Silybum marianum (milk thistle).

According to the company, the addition of Silybin gives new Hepatosyl Plus a **triple antioxidant approach** to liver support to help neutralise free radicals within the liver. Free radicals are produced by hepatocyte mitochondria and cause oxidative damage to cell membranes, protein and DNA.

Hepatosyl Plus's triple approach includes:

- **S-adenosylmethionine (SAMe)** in a stable, pure and absorbable form, which is converted into the potent liver anti-oxidant glutathione and also helps to maintain bile flow;
- **Vitamin E**, which is well-known as a potent liver antioxidant; and

- **Silybin**, which works as an antioxidant by increasing cellular superoxide dismutase.

Hepatosyl Plus remains the **only liver supplement to contain Vitamin K** which is needed by the liver for the production of many essential clotting factors, such as factors II, VII, IX and X, making it ideally suited for **pre and post anaesthetic liver support**.
